

ALL-IN-ONE SPEAKER/PLAYER

*Our FlashAudio Si
digital audio repeater
is housed completely
inside the speaker*

Simple, space-saving audio solution

Signal-Innova's FlashAudio-Si digital audio repeater hidden in an indoor/outdoor enclosure speaker! Great for looping audio in small rooms. For playback variety, many audio segments can be loaded onto the player's SD card.

Speaker: 100 Hz - 20 kHz.

4" polypropylene woofer, .75" balanced drive tweeter

Weather-resistant housing; pivoting metal brackets included.

Speaker dimensions: 6" wide, 8.25" high, 5.25" deep (6.75" with bracket)

Motion Detector option:

A motion detector can be integrated into the system so that the audio is silent until triggered by a visitor's motion.

If added internally, our mini motion detector replaces the tweeter, resulting in a frequency output range of 100 Hz - 15 kHz.

The mini detector will be triggered by motion up to 15' away.
